

EZFETCH

The Complete E-Enablement

Web Services Suite for:

- Supply Chain Management.
- Demand Management
- E-Procurement

eZfetch, is a powerful e-Enablement web services package. It has the advantage of working on almost any database and server; it is readily installed within days and has user friendly features.

Have you improved your customer service and reinforced connections to your B2B partners? Does this show in your operations?

“Customer service improved. Hailed as possibly the best advance made this year by our customer group in a year of significant service and cost enhancements... On demand information means lost pieces of paper are not such a trauma requiring archives or reprinting and resending information.”

Phil Prain – General Manager Metroplex - Ireland

eZfetch is part of a family of AS400 products including eZreorg and eZarchive.

REAL-TIME DATABASE ACCESS MEANS REAL BENEFITS

A bespoke software solution for real database access is providing real payoffs.

“Customers love it, we have innovative systems that provide them and suppliers with real time access to information on our databases. Delivery details invoice and promotional information are just a few of the functions that can be directly accessed. None of this would be possible without our web-based software system.” - Ann Blair, IS Logistics Project Manager at Golden West Foods Ltd.

Golden West foods Ltd, which counts McDonald's as a customer and services over 1300 outlets, is reaping real benefits.

Ann adds, “The system is very flexible and security is well managed, we can also add functionality or modify it as circumstances change. Customers are impressed by the capability it gives them and it's also a good promotional tool when we talk to potential clients.”

A bespoke software solution keeps the food chain moving

Deliver relevant and important data from your back-end to your suppliers' desktops.

E-Procurement
Link your Procurement to the Net and save and eliminate cost intensive unbudgeted spending.

eZfetch – a stepping stone approach to e-Enablement

Multifunctional and Flexible

– Build collections of web-based platforms, which are tailored to you and your business partners; supplier's needs.

Compatible – Funded upon industry standard techniques, eZfetch is capable of collecting information from almost any back-end database. eZfetch integrates easily with existing business applications.

Pre -configured – The retrieval of information from the back-end is preconfigured via the built in data dictionary and defines the data fields that can be used in your templates.
Secure – eZfetch provides real-time information from your back-end without giving direct access to it. Numerous built-in security features ensure that your data is kept safe.

Customisable web Site Design - In addition eZfetch allows the creation of multiple web sub-sites for each of your target audiences by creating a set of inter-linking templates. These templates are created using the standard-internet HTML language so no special expertise is required.
